Summary

7+ years experience building scalable SaaS platforms | Systems handling 10k+ DAU | Open to Global Remote

Results-driven full-stack engineer specializing in high-performance web applications using React, Next.js, and Node.js. Proven track record in building scalable architectures, optimizing performance, and delivering reliable systems. Strong experience in remote collaboration, system design, and end-to-end product development.

Remote & Collaboration Experience

- Worked in distributed teams across time zones
- Strong async communication (Slack, Jira, Notion)
- Available for US/Europe overlap hours

Core Competencies

Frontend: React, Next.js, TypeScript, Redux, Tailwind, Material UI, Chakra UI

Backend: Node.js, Express, Nest.js, REST APIs, Microservices

Cloud & DevOps: AWS, GCP, Docker, CI/CD (GitHub Actions), Serverless, Monitoring (Grafana, Sentry)

Databases: MongoDB, PostgreSQL, MySQL, Firebase, DynamoDB, Redis

Specializations: Performance Optimization, Scalable Architecture, Security (JWT, Bcrypt, OWASP), UX Modernization

Soft Skills: Collaboration, Ownership, Leadership, Critical Thinking

Education

Rajiv Gandhi Technical University, Bhopal

June 2013 – June 2017

Bachelor of Engineering

Work Experience

Technomatz IT Solutions - (Senior Software Engineer)

Mar 2024 – Present

- Architected and deployed REST APIs powering real-time data exchange across 3 core product lines, cutting average response time from 400ms → 300ms (25% faster) and boosting user retention.
- Strengthened security by implementing JWT-based authentication and encrypted password storage with Bcrypt, reducing login-related incidents by 40% and achieving OWASP compliance.
- Drove cross-functional delivery of a new scalable application framework, enabling the team to support 10k+ daily active users with zero downtime during peak traffic events.

Careator Technologies - (Senior Software Engineer)

Apr 2022 – Feb 2024

- Spearheaded end-to-end product deployments, streamlining setup processes and reducing new developer onboarding time by 30%, accelerating team productivity.
- Resolved critical production bugs and performance bottlenecks, cutting system downtime by 20% and improving customer satisfaction.
- Strengthened reliability through advanced debugging workflows and proactive monitoring, ensuring 99.9% uptime across client-facing applications.

Empplan - (Senior Software Engineer)

Aug 2021 – Apr 2022

- Optimized frontend architecture, improving page load times by 35% and reducing rendering issues across browsers and devices.
- Delivered responsive, cross-platform experiences, increasing mobile engagement and ensuring compatibility across 20+ device configurations.

Bestpeers Infosystem - (Software Engineer)

Sept 2017 – Jul 2021

- Developed scalable REST APIs with Node.js & MongoDB, powering data flows for 10k+ daily active users in SaaS and e-commerce products.

Codebase – Internal organizational communication tool.

May 2023 – Present

- Led UI modernization by building scalable React + Chakra UI components, improving design consistency and reducing front-end defects by 25%.
- Integrated secure file upload workflows with AWS S3, enabling fast and reliable handling of 10k+ daily document transfers.

- Additionally, built an AI-driven review analysis module that scraped client website reviews (including username and review text) and used ChatGPT to generate structured positive and negative reports for end users.

Empplan – Sales Promotion application

July 2020 – June 2021

- Developed core e-commerce workflows (catalog, cart, payment) using Redux-Saga and Gatsby, enabling smooth transaction handling for multi-region campaigns.
- Implemented cloud-based storage with GCS, ensuring secure, scalable upload of promotional assets and sales reports.

Remo – Virtual Event Management Platform

Dec 2019 – June 2020

- Architected real-time chat and conferencing interfaces using Firebase, enabling seamless communication for hundreds of concurrent event participants.
- Expanded platform scalability by increasing organization limits, driving a 22% boost in engagement across hosted virtual events.
- Collaborated on multiple high-stakes client projects, ensuring on-time delivery and adherence to enterprise-grade quality standards.
- Boosted frontend performance by implementing lazy loading, code-splitting, and Redux optimizations, cutting average page load times by 40%.

Projects

Costco – E-commerce application

Aug 2021 – May 2023

- Engineered a Next.js-based high-performance frontend, reducing load times by 30% and improving conversion rates across desktop and mobile users.
- Collaborated with design and backend teams to deliver a seamless, responsive shopping experience.

Rageon – E-commerce application

Dec 2019 – June 2020

- Developed interactive product customization modules with React.js and Material-UI, enhancing user personalization and boosting cart additions.
- Optimized image rendering and lazy loading strategies, cutting page load times by 20%+ and improving mobile performance scores.
